

February 22nd

Levko, Yuriy, Nathan, Jessica, Tyler

Missing: Steve

Need to do:

- Tests

- Front end tests (angular)

 - examples in packages/core/articles/public/tests BUT they don't work

 - framework came with these tests commented out

 - take a look at Levko's old project and see how they did tests there

- Back end tests

 - can do get test / need to figure out post test, or any test that's authenticated

 - Levko will try to do it today

- Model tests are basically there

- Issues with authentication and API access but not with web – need to figure out why

- Once the controller test is done by Levko, can apply it to packages we are working on

- Don't need to worry about deployment, Levko set up Heroku – might move to AWS

- Tyler is working on interface (bootstrap classes)

- Write tests before feature

- Jessica is going to merge

- Levko is working on Courses, big part of it is the testing

- Yuriy is working on Voting,

 - stuck on routing

 - trying to get voting to work,

 - create answer object, store within a question object etc.

 - Tyler and Jessica are going to help Yuriy with the voting feature

- Nathan is going to work with Levko on the authentication issues with the api

- 2 features: voting and courses
